

Go to the **Tools->Board** and select your board (AdaFruit Flora)

To Select your Serial Port, go to **Tools->Port** and select the port your device is on. It should be something like **/dev/cu/usbmodemxxx**

To make sure that your board is connected, load an example project to the board

If it is not successful, try closing and reopening the Arduino IDE.

If this does not work, try restarting your computer with the arduino plugged into the USB.
